- · All sectors posted gains across the cap spectrum.
- Communication Services was the top performing sector in large caps.
- In mid-caps, Energy was the leader, while Materials was the top performer in small-caps.

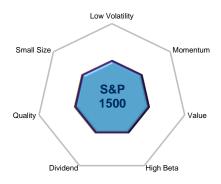

^{**}Utilities MidCap and SmallCap Capped Sectors include constituents of the GICS Utilities and Communication Services sectors.

^{***}Financials & Real Estate SmallCap Capped Sector Index, launched April 30, 2018, no longer overlaps with some constituents of the Technology Select Sector and Consumer Discretionary Select Sector Index. indices became mutually exclusive as of Sept 24, 2018, coincident with the change in GICS methodology. Performance prior to April 30, 2018 is backtested. Source: S&P Dow Jones Indices LLC and/or its affiliates. Data as of January 31, 2019.

KEY TO FACTOR SCORINGS FOR INDICES

Factor Definitions

Each constituent of the S&P 1500 index is provided with a factor "score" for each of Beta, Volatility, Momentum, Dividend, Size, Value and Quality.

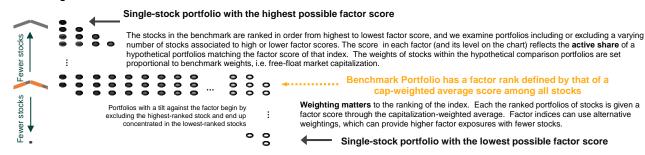

Factor	Measurement at single-stock level
Volatility	Trailing 12-month daily return volatility
Momentum	Twelve-month price change as of one month ago ("13 minus 1 momentum"), divided by the daily volatility during the twelve-month period that ended one month ago. For more details, see the S&P Momentum methodology
Value	The average of (normalized) earnings to price ratio, book to price ratio and sales to price ratio. For more details, see the <u>S&P Value</u> methodology.
Beta	Trailing 1 year beta of stock daily returns to the benchmark's return.
Dividend	Trailing 12-month dividend
Quality	The average of the (normalized) return on equity, the accruals ratio and the financial leverage ratio. For more details, see the <u>S&P Quality</u> methodology.
Size	Free-float market capitalization

Index Factor Ranking and Factor Diagram Scaling

Index Scores

Each index is provided a score in each factor from -100% to +100% based on how much of the total capitalization of the benchmark would must be excluded in order to provide a portfolio of stocks with similar exposure to that factor. This is done by examining a ranked series of hypothetical cap-weighted portfolios, including or excluding an increasing number of the stocks with the highest or lowest scores. An illustration of the process may be found at this link.

Factor Diagram Axis

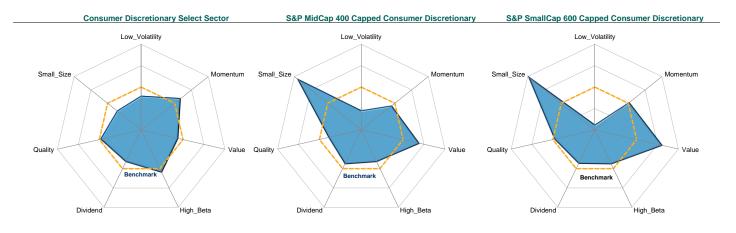

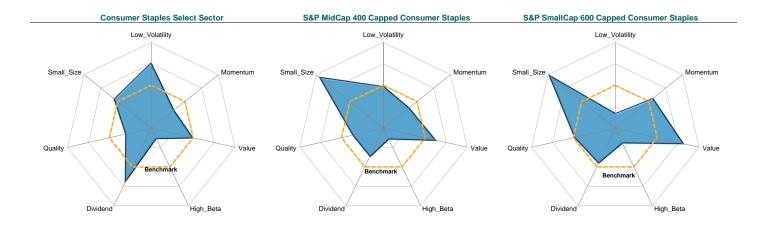

Notes On Additional Index Statistics

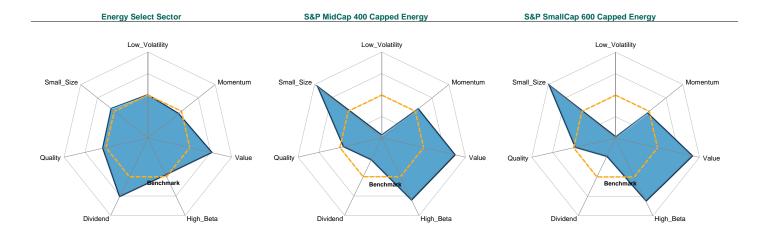

Statistic	Notes
Price/Earnings (P/E)	Price per share as of observation date divided by earnings per share, calculated by adding the last twelve calendar months' quarterly reported earnings per share.
Price/Book (P/B)	Price per share as of observation date divided by latest annual reported book value per share.
Price/Sales (P/S)	Price per share as of observation date divided by sales per share, calculated by adding twelve calendar months' quarterly reported sales per share.
Return on Equity (ROE%)	Earnings per share divided by latest annual reported book value per share.
Financial Leverage Ratio	A company's total debt divided by its latest annual reported book value, calculated as book value per share multiplied by common outstanding shares. Debt, book value per share, and common outstanding shares are latest annual reported values.
RSI - 30 Day	RSI is an indicator of the speed and change of price movements and oscillates between zero and 100. RSI is considered overbought when above 70 and oversold when below 30. RS is the average gain divided by average loss over the past 30 days. Then RSI is equal to 100 minus 100 divided by 1+RS.

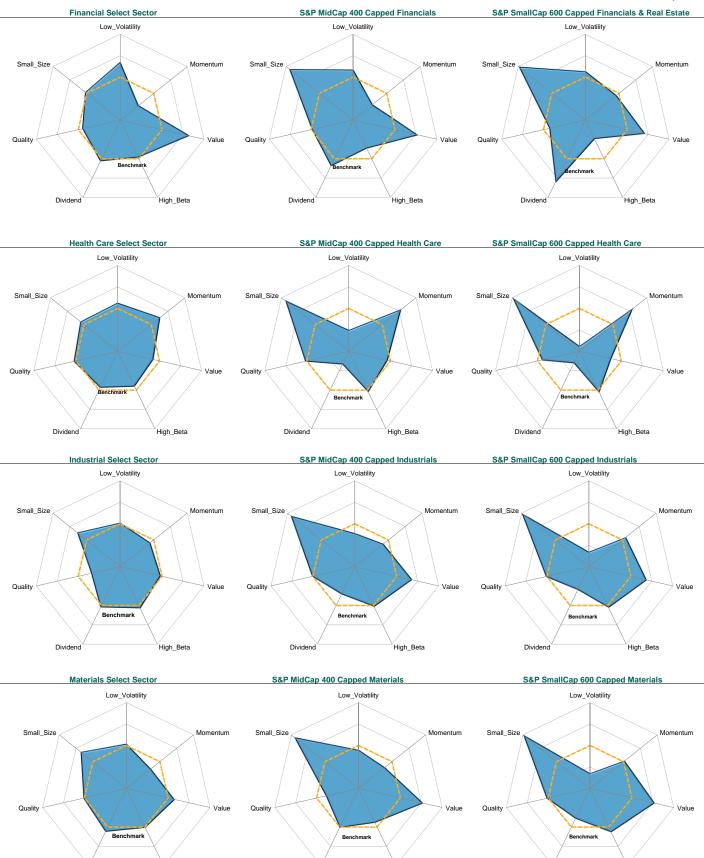

COMMENTARY

- The diagrams below illustrate factor exposures relative to the S&P 1500 across sectors, from large to small-caps.
- For example, Consumer Discretionary starts out with more volatility than the S&P 1500, and becomes relatively more volatile at the mid and small-cap levels.

- Financials held the highest technical position for large caps.
- P/Es increased across most sectors, given January's broad-based market rally.
- The Communication Services Select Sector is the most volatile sector in large-caps. Meanwhile, Energy continues to be the most volatile sector in mid and small-caps.

^{**}Utilities MidCap and SmallCap Capped Sectors include constituents of the GICS Utilities and Communication Services sectors.

***Communication Services Select Sector Index, launched April 30, 2018, no longer overlaps with some constituents of the Technology Select Sector and Consumer Discretionary Select Sector Indices. Source: S&P Dow Jones Indices LLC and/or its affiliates and FactSet. Data as of January 31, 2019.

COMMENTARY

- · Dispersion increased across most sectors, particularly in large-cap Communication Services.
- Correlations decreased across most sectors, especially in small and mid-cap Financials.

NOTES

- The charts above decomposed volatility into its two main components: dispersion and correlation. The dispersion and correlation data points are each sector's average monthly value over the trailing 12 months. Trailing annualized volatility is included in parentheses. Index dispersions shown based on calendar month stock-level index-weighted dispersion. Index correlation based on single stock daily total returns during each calendar month. See "Implications of Sector Dispersion" for more information.
- See "At the Intersection of Diversification, Volatility and Correlation" for details on the relationship between correlation and dispersion.
- See "Dispersion: Measuring Market Opportunity" for the definition of index dispersion and more information on the uses of dispers ion.
